Description
HexPly® M901 is a hotmelt, thermosetting, high-tack epoxy resin matrix, suitable for prepreg applications at which cure cycles of 130°C and above are required. HexPly® M901 is specifically designed for manufacture of structural composites that are exposed to harsh thermal and environmental conditions.

Upon cure within the recommended temperature range of 130 – 170°C, HexPly® M901 exhibits a high glass transition point and an excellent retention of its physical properties after hot-wet treatment. Short cure cycles of 10min and below can be applied to obtain an excellent green strength of the composite part, ready for demoulding and further processing. A maximum glass transition point of 195°C can be obtained by postcure of the matrix at elevated temperatures.

The product has an excellent shelf life, achieving 15 weeks at ambient conditions and 3 weeks at 35°C.

Resin Matrix Properties

Dynamic Thermal Properties by DSC (ISO 11357-5) (cure -40 to 270°C @10°C/min) (1)

Uncured Tg: 0 – 5°C
TOnset: 131 – 141°C
TPeak: 141 – 151°C
Enthalpy: 380J/g +/-20%

(3) Measured by DMTA according to ASTM E-1640-09 @3°C/min, Maximum Loss Modulus (G")
- **Density (ISO1183-1):** 1.10 – 1.25g/cm³
- **Color:** Off-White/Yellowish
- **Tack:** High
- **Hot-Wet Performance:** (4)
  - $T_g$ Dry (3): 193°C
  - $T_g$ Hot-Wet (3): 136°C

(3) Measured by DMTA according to ASTM E-1640-09 @3°C/min, Maximum Loss Modulus (G’’)
(4) 2 weeks at 70°C, specimens immersed in water

**Typical Viscosity Profile**
(Data obtained from plate-plate rheometry, temperature run in reference to ISO 6721-10; Representative for a selected, single batch)

**Dynamic Complex Viscosity of HexPly® M901 @ 5°C/min**
**Shelf Life**

(Stored sealed, in dry conditions and in absence of direct sunlight)

- @ +35°C 3 weeks
- @ +23°C 15 weeks
- @ +5°C >6 months

(5) Shelf Life refers to the maximum time at given temperature after which the resin is being impaired in its thermal or rheological properties from the date of manufacture. An increase in uncured $T_g$ above NTP temperature limitation (NIST) defines the end of shelf-life of the resin matrix.

**Typical Curing Conditions**

- Recommended cure temperature range: 130 – 170°C
- Recommended heat-up rate: 0.5 – 5°C/min
- Recommended cure cycle: 25 – 130°C @1°C/min, 10min @130°C, 130 – 150°C @1°C/min, 180min @150°C
- Pressure gauge: 0.5 – 5bar

Dependent on the application, alternative cure temperatures than the ones from 130 – 170°C might be applied but degree of conversion and cured $T_g$ can deviate from stated ranges. The optimum cure cycle, heat-up rate and dwell period is dependent on component size, layup construction, oven capacity and thermal mass of tool.
**Precautions for Use**

HexPly® M901 is exclusively available in prepreg or semipreg format and a Safety Data Sheet can be provided for this product. The usual precautions when handling uncured synthetic resins and fine fibrous materials should be observed. The use of clean disposable inert gloves provides protection for the operator and avoids contamination of material and components.

**For more information**

Hexcel is a leading worldwide supplier of composite materials to aerospace and industrial markets. Our comprehensive range includes:

- HexTow® carbon fibers
- HexForce® reinforcements
- HiMax® multiaxial reinforcements
- HexPly® prepregs
- HexMC®-i molding compounds
- HexFlow® RTM resins
- HexBond™ adhesives
- HexTool® tooling materials
- HexWeb® honeycombs
- Acousti-Cap® sound attenuating honeycomb
- Engineered core
- Engineered products
- Polyspeed® laminates & pultruded profiles
- HexAM® additive manufacturing
